In this article, we explore the rapid growth of the EV market, the current state of the charging landscape, and how Sigenergy is at the forefront of revolutionizing energy storage and ...

In the PV self-consumption optimization use case, EVs were used as home storage systems to store PV energy that is charged into the traction battery during the day and ...

This paper introduces a novel testing environment that integrates unidirectional and bidirectional charging infrastructures into an existing hybrid energy storage system.

The technology enables charging the batteries of electric vehicles and transferring the stored energy back to the stationary storage ...

One of the most promising technologies emerging from this intersection is bi-directional charging, which allows EVs to both draw power from the grid and return energy to it.

While both the EVAC and EVDC provide crucial benefits to EV owners, Sigenergy has taken a bold step forward with the introduction of bi-directional charging in the EVDC, ...

As the federal government moves toward fleet electrification, site decarbonization, and deployment of local distributed energy resources (DERs), agencies should consider both ...

The technology enables charging the batteries of electric vehicles and transferring the stored energy back to the stationary storage system in the building or to the grid when ...

Solar-plus-storage system adoption is rising, particularly in California and Hawaii, driven by net metering policy changes encouraging ...

Smart grid technologies have enhanced the utility of EVs through Vehicle-to-Everything (V2X) technology, which includes various forms of bidirectional charging. This capability leverages ...

Solar-plus-storage system adoption is rising, particularly in California and Hawaii, driven by net metering policy changes encouraging energy self-consumption. Given the right ...

Through a comprehensive literature research and in-depth interviews with 16 V2G experts, we identify the current state, research gaps, and insights related to V2G. In particular, ...
