What is the ESS price forecasting report (PFR)?

To navigate this complex landscape, companies need a reliable tool to predict future cost and pricing trends. This is the driving force behind Clean Energy Associates' ESS Price Forecasting Report (PFR).

What happened to ESS bid prices in March 2024?

In March 2024, ESS bid prices varied depending on their storage capacity, with an overall downward trajectory evident, particularly in the case of four-hour ESS bids, which hit yet another all-time low. Raw material prices for storage battery are expected to remain stable. At the outset of 2024, battery prices experienced a decline.

Will ESS battery prices remain stable in January?

Combined with relatively stable material costs, ESS battery prices in January are forecast to remain steady. Manufacturers have shifted their focus amid intense competition in the ESS battery market to advancing technology and enhancing production processes.

What is the price gap between ESS and batteries?

In March, the price disparity between ESS and batteries has continued to shrink. The average price of a 280Ah/0.5C storage battery hovered around 0.38 yuan/Wh in March 2024. According to our data, the average winning price for a 2-hour ESS is approximately 0.63 yuan/Wh, resulting in a price gap of around 0.25 yuan/Wh.

Estimated at roughly \$73 per kilowatt-hour (kWh) in 2024, the cost of Chinese lithium iron phosphate (LFP) battery cells is projected to ...

Since 2023, the battleground of pricing has grown fiercer, with the cost of lithium carbonate plummeting, signaling an escalation in the ...

TrendForce's latest investigations reveal that the prolonged decline in the prices of Chinese EV and ESS batteries during 2024 showed signs of easing in the fourth quarter.

TrendForce's investigations show that the prolonged price decline in Chinese EV and ESS batteries in 2024 eased in the fourth quarter.

Energy Storage CapEx prices have dropped from their May highs, but are not as low as they were at the end of

Q1 2025, according to ...

Lithium carbonate prices have continued to fluctuate at elevated levels; recent price quotes for energy storage cells remain high.

While the global average ESS price per kWh sits at \$465, regional disparities remain stark. The US market sees \$550-\$650/kWh for residential systems due to import tariffs, whereas ...

Estimated at roughly \$73 per kilowatt-hour (kWh) in 2024, the cost of Chinese lithium iron phosphate (LFP) battery cells is projected to climb to about \$87/kWh next year. ...

Since 2023, the battleground of pricing has grown fiercer, with the cost of lithium carbonate plummeting, signaling an escalation in the price wars of ESS tender projects. ...

Ongoing supply chain issues, changing global market dynamics, and the rising demand for energy storage solutions are leading to challenges for buyers of energy storage system (ESS) ...

This Interim Update of the Energy Storage System (ESS) Q1 2025 Price Forecasting Report highlights how newly imposed U.S. tariffs are reshaping the cost ...

Energy Storage CapEx prices have dropped from their May highs, but are not as low as they were at the end of Q1 2025, according to the Q3 Energy Storage Pricing Insights ...
