How much does it cost to install a charging station?

Costs for charging station deployment varied widely with maximum per-port costs reaching into five figures. However, typical installation costs were lower, with most installations costing between \$4,000-8,000.

What are the most relevant Cost metrics for charging stations?

The most relevant cost metrics for charging stations are per-port costs which give an indication of the cost to put in a single charging station, regardless of installation size. This allows an equivalent comparison for costs between installations that have different numbers of ports per site.

How much does a charge ready Charger cost?

On average, chargers deployed by Charge Ready NY cost \$6,921 per charging port, down 21 percent from \$8,774 during the previous PON 2301 program. Per-port costs vary widely between installations, with the highest cost projects reaching about \$20,000 per port for both programs, though costs varied more widely in the earlier PON 2301 program.

Are public charging deployments more expensive?

Lower average costs suggest that public charging deployments usually face more favorable site configurations than workplace or MUD deployments, although the wide variation in costs (especially at the upper end) indicates that projects at some public locations can be much more expensive than the typical case.
