---

IRFP250 is an n-channel advanced power mosfet. The equivalents of IRFP250 are irfZ44, irf9Z34N, 2n7000, and bs170. Light dimmers and speed control of the motors are good ...

Inverters: Used in solar inverters, UPS systems, and other power conversion applications. Audio Amplifiers: Provides high-current switching for Class D audio amplifiers.

IRFP250 is an n-channel advanced power mosfet. The equivalents of IRFP250 are irfZ44, irf9Z34N, 2n7000, and bs170. Light ...

The IRFP250 is a high-power N-channel MOSFET designed for switching and amplification in power electronics applications such as inverters, power supplies, motor drives, and audio ...

Showing 1 to 8 of 8 entriesShow

Description: N-CHANNEL 200V - 0.073ohm - 33A TO-247 PowerMesh II MOSFET. Manufacturer: STMicroelectronics.

Third generation Power MOSFETs from Vishay provide the designer with the best combination of fast switching, ruggedized device cost-effectiveness. The TO-220AB package is universally ...

In renewable energy systems, this MOSFET boosts the efficiency of inverters used in solar and wind energy solutions. In the automotive industry, the compact and high-density features of ...

Renewable Energy: Inverter systems for solar photovoltaic (PV) and wind power generation utilize IGBT modules for converting DC power from solar panels or wind turbines into AC power ...

In renewable energy systems, this MOSFET boosts the efficiency of ...

Description: N-CHANNEL 200V - 0.073ohm - 33A TO-247 PowerMesh II ...

This benefit combined with the fast switching speed and ruggedized device design that HEXFET power MOSFETs are well known for, provides the designer with an extremely efficient and ...
