The project will be delivered in stages, with initial construction expected to begin in late 2026 and full buildout of solar and battery facilities planned for 2027 and 2028. Officials at ...

In 2024, 91% of new renewable projects offered cheaper electricity than the lowest-cost, new-build fossil fuel alternative. The cost of battery energy storage systems for grid ...

"Residential storage is expected to outpace solar due to stronger policy resilience, high attachment rates in key markets like ...

Meeting the proposed operational deadline coupled with permitting delays and supply chain challenges means developers would have to rush to start and finish projects in ...

"Residential storage is expected to outpace solar due to stronger policy resilience, high attachment rates in key markets like California and Puerto Rico and continued ITC ...

While Q4 grid-scale energy storage deployments were down 20% compared to Q4 2023, this was primarily due to the delay of 2 GW of projects in late-stage development from ...

In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, with 32.5 GW ...

What makes 2025 distinct is the overwhelming contribution from clean energy. More than 90 percent of planned additions will come from solar, wind, and battery storage, signaling ...

Latest news on energy storage projects, BESS, capacity expansion, and regulatory updates across Europe, US & Canada, Latin America, and Asia Pacific. Discover how energy ...

US energy storage set a Q1 record in 2025 with 2 GW added, but looming policy changes could put that growth at serious risk.
