Solar PV is forecast to account for more than half of all planned new electricity capacity this year. A total of 64GW new utility ...

In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, ...

The anticipated growth in solar photovoltaic and battery storage capacities is particularly pronounced in Texas. Texas has ...

Solar-powered generation is expected to lead the US in 2025 capacity additions despite an anticipated slowdown in installations as the moratorium on the US antidumping ...

Developers added 12 gigawatts (GW) of new utility-scale solar electric generating capacity in the United States during the first half of 2025, and they plan to add another 21 GW ...

Study Coverage: The report segments the solar container market by component, type, installation type, power capacity, and ...

The US commercial solar market had a massive Q2 2025, the second highest in history, with 585 MW dc installed. This was also the segment's largest first half of the year ...

The anticipated growth in solar photovoltaic and battery storage capacities is particularly pronounced in Texas. Texas has contributed 3.2GW, or 27%, of the solar capacity ...

Solar deployment is heating up as the year goes on. About 12 GW were added in the first half, but over 21 GW is expected to be ...

Developers in the US installed 12 GW of utility-scale solar capacity in the first half of 2025 and plan to add another 21 GW in the second half of the year, according to data ...
