el can convert direct sun rays to electricity. Conventional solar panel, fixed with a certain angle, limits there area of exposure from sun due to rotation of Earth. This project presents the ...

Design and encapsulate function block of PLC based on SPA. Economics and heat efficiency analysis were conducted using SAM. Lightweight mechanical structure was used for ...

The objective of this mini project is to develop an automatic solar tracking system where solar panels will keep aligned with the Sunlight in order to maximize in harvesting solar power.

In this paper, a PLC-based sun-tracking system for parabolic trough solar concentrator which could track the sun along one axes was designed and implemented. In the system, the tracking...

The target of this project was to establish a solar tracking system with programmable logic controller as its controlling unit. More specifically this project concerned the programming of ...

This paper presents a new design of a Three-axis solar tracking system which is based on Programmable Logic Controller (PLC). The automatic tracking system of solar radiation is ...

We have implemented a model of automatic solar tracking system using PLC to align solar panel in vertically/horizontally to make sure maximum sunrays are available onto the PV panel.

This research paper presents the design, implementation, and performance evaluation of a single-axis solar tracking system (SASTS) employing Siemens programmable ...

This paper presents the design and implementation of an experimental study of a two-axis (Azimuth and Altitude) automatic control solar tracking system to measure the solar radiation ...

The AC500 PLC uses high-precision solar algorithms to ensure that all type of trackers, for either PV, CPV or CSP, are precisely aligned and follow the movement of the sun with exceptional ...

Solar energy automatic tracking system based on PLC control
