Power generation from solar PV increased by a record 320 TWh in 2023, up by 25% on 2022. Solar PV accounted for 5.4% of total global electricity generation, and it remains the third ...

In the first half of 2024, the United States produced 4.2 GW of PV modules--an increase of 75%, y/y--roughly evenly split between thin-film and crystalline silicon (c-Si) ...

In the first half of 2024, the United States produced 4.2 GW of PV modules--an increase of 75%, y/y--roughly evenly split between thin ...

In our latest Short-Term Energy Outlook (STEO), we expect that U.S. renewable capacity additions--especially solar--will continue to drive the growth of U.S. power ...

Solar growth bolsters other clean energy sources after 90 GW of new solar capacity was deployed over the last two years. Big solar ...

Solar and wind energy will lead the growth in U.S. power generation for at least the next two years, according to EIA estimates. This report uses data from the EIA to analyze ...

Solar energy can be harnessed two primary ways: photovoltaics (PVs) are semiconductors that generate electricity directly from sunlight, while solar thermal technologies use sunlight to heat ...

Power generation from solar PV increased by a record 320 TWh in 2023, up by 25% on 2022. Solar PV accounted for 5.4% of total global electricity ...

In May 2023, solar produced 7.5% of all U.S. electricity production, and solar produced over 5% of all U.S. electricity production from March through October of 2023.

Solar growth bolsters other clean energy sources after 90 GW of new solar capacity was deployed over the last two years. Big solar generation grew by more than 58% in January ...
