OverviewHydropowerWind energySolar energyBiomass energySolid waste energy (waste-to-energy)Geothermal energyTidal energy Vietnam utilizes four main sources of renewable energy: hydroelectricity, wind power, solar power and biomass. At the end of 2018, hydropower was the largest source of renewable energy, contributing about 40% to the total national electricity capacity. In 2020, wind and solar had a combined share of 10% of the country's electrical generation, already meeting the government's 2030 goal, suggesting future displacement of growth of coal capacity. By the end of 2020, the tot...

Vietnam, which aims to achieve carbon neutrality by 2050, is encouraging the development of renewable energy. Among renewable energy, the photovoltaic market has expanded rapidly ...

Vietnam's Eighth National Power Development Plan (PDP 8), released in 2023, emphasizes the expansion of rooftop solar, particularly in off-grid areas and for self ...

As Vietnam continues its rapid economic development, the demand for sustainable and reliable energy sources has never been more ...

Vietnam's Eighth National Power Development Plan (PDP 8), released in 2023, emphasizes the expansion of rooftop solar, particularly ...

Vietnam can leverage domestic solar manufacturing to meet domestic demand, implement direct power purchase agreements (DPPAs) enabling private renewable supplies, ...

Vietnam can leverage domestic solar manufacturing to meet domestic demand, implement direct power purchase agreements ...

Explore the rapid growth of the Vietnam solar market. Discover major solar farm projects, key government incentives, and the ...

As Vietnam continues its rapid economic development, the demand for sustainable and reliable energy sources
