---

With the goal of reaching climate neutrality by 2050, the country is implementing measures to achieve a 100 percent renewable ...

According to data from Red Eléctrica, solar photovoltaic (PV), with a total capacity of 32,043 MW, has surpassed wind power (32,007 MW) to become the technology with the ...

In terms of solar photovoltaic generation by autonomous communities, Extremadura was the community that produced the most electricity in 2023, with 9,168 GWh, which represents 24.6 ...

In Spain, the progress has been even more dramatic. Photovoltaics reached an all-time high, accounting for 21% of electricity ...

In Spain, the progress has been even more dramatic. Photovoltaics reached an all-time high, accounting for 21% of electricity generation, nearly double the EU average. This ...

In Spain, while there is no nationwide mandate requiring the installation of photovoltaic (PV) systems on residential buildings or car parks, certain regional and municipal ...

At some times in spring, as much as 60 per cent of Spain's electricity comes from the sun. That has enabled Spain to slash its use of ...

With the goal of reaching climate neutrality by 2050, the country is implementing measures to achieve a 100 percent renewable electricity mix by that year. Although wind is ...

At some times in spring, as much as 60 per cent of Spain's electricity comes from the sun. That has enabled Spain to slash its use of gas and coal-fired power stations. ...

In Spain, while there is no nationwide mandate requiring the installation of photovoltaic (PV) systems on residential buildings or car parks, certain regional and municipal regulations have ...

Spain is one of the first countries to deploy large-scale solar photovoltaics, and is the world leader in concentrated solar power (CSP) production. Spain is also one of the European countries ...

Growth in installed renewable capacity and favorable weather conditions drove a 35.5% increase in hydropower output compared to ...
