OverviewHistoryMaterialsUsesChallengesAdvantagesThin-film solid-state batteriesMakersBetween 1831 and 1834, Michael Faraday discovered the solid electrolytes silver sulfide and lead(II) fluoride, which laid the foundation for solid-state ionics. By the late 1950s, several silver-conducting electrochemical systems employed solid electrolytes, at the price of low energy density and cell voltages, and high internal resistance. In 1967, the discovery of fast ionic conduction γ -alumina for a broad class of ions (Li^+ , Na^+ , K^+ , Ag^+ , and Rb^+ ...
