The creation of the National Energy Efficiency Com-mittee in 2011 helped to legitimize energy efficiency within the government, but a series of hurdles and limits on the committee's power ...

With the rapid expansion of new energy, there is an urgent need to enhance the frequency stability of the power system. The energy storage (ES) stations make it possible effectively.

Did you know Paraguay's electricity demand grew 42% in the last decade? Let's explore how modern energy storage systems are reshaping Asuncion's power infrastructure.

For big energy users, especially those needing more than 100 megawatts (enough to power a small city), it is absolutely essential to locate them near very powerful main ...

This issue has spurred governmental action to promote more sustainable energy alternatives, such as biomass energy projects and efficient cooking technologies, to preserve the nation's ...

Energy in Paraguay is primarily sourced from hydropower, with pivotal projects like the Itaipu Dam, one of the world's largest hydroelectric facilities. This reliance underscores the need for a robust infrastructure, including efficient transmission networks and distribution systems, to leverage the country's renewable resources fully. Despite its extensive hydroelectric capacity, Paraguay faces environmental challenges, notably deforestation

Let's face it--energy storage isn't exactly dinner table conversation. But when Asuncion's shared storage model slashes electricity bills by 40% for local businesses *cue jaw ...

Combining compressed air energy storage (CAES) with solar-thermal reservoirs, this \$120 million project might just redefine urban energy resilience in South America.

The Asuncion Energy Storage Project bidding process aims to fix this glaring inefficiency through a 150MW/600MWh battery storage system, potentially becoming South America's largest ...
