Will Victoria's New renewables rollout threaten its energy security?

Australia's top clean energy companies have poured scorn on Victoria's new renewables rollout plan, which they say will threaten the state's energy security by stifling their ability to bring on new power projects before the closure of coal-fired generators.

What is Victoria's energy plan?

"The plan attempts to minimise the area of Victoria required for renewable energy zones and the new transmission infrastructure needed, while also providing project developers and investors with sufficient opportunity to generate the energy we need to power homes, farms, schools, businesses, hospitals and other essential services."

How will Victoria meet its future energy needs?

To meet Victoria's future energy needs, the plan supports the integration of: 5.8 GW of onshore wind. 2.7 GW of solar. 3.4 GW of storage. Up to 9 GW of offshore wind by 2040. Seven major transmission programs are proposed to enable this transition, including: 380 km of new lines and 430 km of upgrades. A new 500 kV link from Sydenham to Tarrone.

What is vicgrid's 2025 transmission plan?

VicGrid has released the 2025 Victorian Transmission Plan. The plan marks a significant step in the state's renewable energy transition. It sets out the new energy infrastructure we need to keep Victoria's lights on as coal-fired power stations close. We have taken a new approach to planning renewable energy and transmission infrastructure.

On Monday, the energy market operator announced that the timeline for completing the critical VNI West transmission project between Victoria and NSW had blown out by two years.

Seven major transmission programs are proposed to enable this transition, including: 380 km of new lines and 430 km of upgrades. A new 500 kV link from Sydenham to ...

Government authority VicGrid released its draft 2025 Victorian Transmission Plan late last week, outlining a 15-year plan to ...

The project is one of 50 large-scale solar farms either operational, under construction or soon to be commissioned across Victoria, with the government also rolling out ...

One of Australia's largest renewable energy transmission projects has expanded the planned development zones for solar, battery and wind developments with the cost of ...

Six new renewable energy zones that could deliver up to 35.2 GW of new solar, wind and storage developments by 2040 form the ...

Victoria has sharply increased the projected cost of its long-term renewable energy transmission plan to \$7.9 billion as the state government finalized a blueprint that sets out how ...

The transmission projects needed from 2025-2040 to improve and modernise the power grid so energy can flow from renewable energy ...

Government authority VicGrid released its draft 2025 Victorian Transmission Plan late last week, outlining a 15-year plan to move away from coal.

For the first time, the report is tracking progress towards our energy storage and offshore wind targets following the legislation of these ...

The transmission projects needed from 2025-2040 to improve and modernise the power grid so energy can flow from renewable energy zones and offshore wind areas to where ...

Victoria plans to build renewable energy zones covering 7 per cent of the state's land area, with 5.2 million solar panels, nearly 1000 ...
