---

Vietnam is emerging as a clean energy frontrunner in Asia, with key technologies such as offshore wind (OSW), battery storage, and green hydrogen offering vast potential to ...

With global costs for solar, wind, and battery storage systems continuing to fall, Vietnam could replace fixed FiTs with transparent auctions, enabling clean energy ...

The plan reflects Vietnam's ambition to align with global climate targets while ensuring the country's power needs are met. As a developing economy with a growing middle ...

The site is considered optimal for wind energy due to the consistent air currents that flow along the country's long coastline from north to south throughout the year. "The Tien ...

Vietnam has already deployed over 20 GW of solar and 6 GW of wind in just a few years. This demonstrates a clear sign that Vietnam doesn't lack investor interest and that ...

With global costs for solar, wind, and battery storage systems continuing to fall, Vietnam could replace fixed FiTs with transparent ...

With abundant solar and wind resources, Vietnam has the fundamentals to become a regional clean energy leader. Wind power ...

In the PDMP8, Vietnam's government planned to develop two electricity storage types: pump hydro and batteries. BESS will be applied to the power system when the price is ...

With abundant solar and wind resources, Vietnam has the fundamentals to become a regional clean energy leader. Wind power alone is projected to grow at a 15.51% ...

A draft of the new policy outline, likely to be finalized in coming weeks, scraps plans to build offshore wind turbines, instead building more onshore wind capacity, rooftop ...
