What Exactly Is a Grid-Tied Inverter? A grid-tied inverter, also known as a grid-connected or on-grid inverter, is the linchpin that connects your solar panels to the utility grid.

In a grid-tied system, your solar inverter syncs with the utility grid, feeding excess electricity back to the grid or drawing from it when needed. On the other hand, an off grid solar ...

OverviewOperationPayment for injected powerTypesDatashetsExternal linksGrid-tie inverters convert DC electrical power into AC power suitable for injecting into the electric utility company grid. The grid tie inverter (GTI) must match the phase of the grid and maintain the output voltage slightly higher than the grid voltage at any instant. A high-quality modern grid-tie inverter has a fixed unity power factor, which means its output voltage and current are perfectly lined up, and its phase angle is within 1° of the AC power grid. The inverter has an internal com...
